

Why choose LabCorp Corporate Solutions?

- **One Source for:**
 - drug-free workplace testing
 - employee wellness testing
 - employee safety testing
 - fingerprint capture
 - background checks
- **Convenient access to services nationwide**
- **User-friendly Web tools for data management**
- **Consistent service**
- **Dedicated support staff**

The National Highway Traffic Safety Administration reports that alcohol is the single largest cause of fatal crashes.¹ Alcohol-related fatalities accounted for 40 percent of all highway fatalities in 2001.¹

Alcohol and drug abuse costs the American economy an estimated \$276 billion per year in lost productivity, health care expenditures, crime, motor vehicle crashes, and other conditions.²

LabCorp's Occupational Testing Services offers instant saliva alcohol testing at many of its more than 1000 patient service centers (PSCs) nationwide. The instant saliva alcohol test is performed on-site by trained professionals to obtain an immediate result. The saliva alcohol test used by LabCorp conforms to the Department of Transportation (DOT) model specifications for screening devices that measure alcohol in bodily fluids.³ In the event that a positive screen is obtained with the instant test, a DOT required breath alcohol confirmation can be performed at one of LabCorp's Substance Abuse Collection Professional Network (SACPN) locations.

LabCorp can customize a saliva alcohol testing program to meet your postaccident, random, or preemployment testing needs. In addition to saliva alcohol testing, LabCorp offers laboratory-based blood alcohol testing for nonfederally regulated programs. The same LabCorp PSC network that conducts saliva alcohol screening may also be used for blood alcohol testing.
