

LabCorp Corporate Solutions for Nursing Care Facilities

- Detect employee abuse of available narcotics and sedatives
- Reduce employee turnover due to drug abuse
- Provide a safer home for residents

for pre-employment, post-accident, random, and for cause screening of:

- Administration
- Nursing Staff
- Nursing Assistants
- Facilities Staff and Cafeteria Staff

Providing quality care to residents is every nursing care facility's goal. For this reason, LabCorp offers employee screening services designed to maximize staff productivity. Our medical professional drug-free workplace profiles are ideal for nursing care facilities.

Medical Professional Profiles

LabCorp's medical professional profiles include drugs that may be used to treat nursing care facility residents and could be abused by employees. Traditional drug screening panels may not detect some of these highly addictive substances. Our specialized profiles have been developed to incorporate several subcategories of drugs.

National Laboratory Network

Time is of the essence when dealing with the sensitive issue of potential drug abuse. To provide your organization with the best possible test result turnaround, LabCorp maintains a national network of seven strategically located laboratories. Specimens are typically routed to the closest certified laboratory from the point of collection.

National Specimen Collection Network

For customer convenience, LabCorp offers drug screen collections at many of its more than 1100 patient service centers (PSCs) located throughout the US. When additional coverage is needed, our National Specimen Collection Network coordinates services through third-party facilities. Our extensive network assures that your employees are never far from a LabCorp network facility.

Innovative Information Technology Solutions

LabCorp offers innovative information technology solutions to meet specific program management needs. Multiple connectivity options provide customers with secure access to data.

Web-based LabCorp Solutions:

- Donor registration
- Chain-of-custody
- Reporting and specimen status
- Viewing of imaged chain-of-custody

Additional Connectivity Options:

- Electronic data interchange
- Automatic faxing of results
- Voice reporting for nonregulated results (available in English and Spanish)

Management Reports

LabCorp offers statistical summary data and result turnaround time reports to assist in workplace testing program management. Customized data management reports are available to meet your organization's unique needs.
